
ColdBox Platform

A Web Development Revolution

What is ColdBox?

ColdBox is a conventions based ColdFusion development platform. It provides a set of reusable code and tools that can be used to increase your development productivity as well as a development standard for working in team environments. ColdBox is comprehensive and modular which helps address most infrastructure concerns of typical ColdFusion applications.

Why ColdBox?

- Conventions over configuration is our mantra
- Developed with simplicity and extensibility in mind
- ColdFusion ORM extensions and native Hibernate support classes to make querying and working with ORM objects a breeze
- ColdBox Modules introduce modular architecture to your applications. No more hard to maintain monolithic applications
- RESTful architecture is at the core of every ColdBox application
- ColdBox integration and unit testing support via TestBox
- Fully documented, always find what you need
- CLI and package management integration via CommandBox
- An ever-growing community and professional support
- Adobe ColdFusion Builder, Sublime and CFEclipse IDE integration.

A Software with Experience

ColdBox has been powering both small and enterprise level applications since 2005 and it is used by thousands of developers worldwide. We have a proven track record of stability, reliability and scalability. Used by clients like NASA JPL, NASA Kennedy Space Center, Adobe TV, IDG, eCivis, Equator Financial, FAA, US Air Force, State of Oregon, General Electric, ESRI and countless others. The ColdBox Platform has become the Object Oriented application framework of choice for premier ColdFusion developers around the world.

ColdBox is Modular

ColdBox is composed of an internal core library and 3 standalone frameworks that assemble themselves accordingly at runtime. Each of these frameworks can also be used outside of ColdBox in any framework or no framework at all.
